TABLE OF CONTENTS

Description

With ProKeyGen PLUS, you can easily generate large customizable collections of unique 30-character Product Keys / Serial Numbers for use with your own products. With the click of a button, save all your keys into a text file that can be used as the basis for the Product Key listing required by brokers/resellers of your products.

LEGAL NOTICE

ProKeyGen PLUS is to be used solely for creating Product Keys for your own personal and commercial products. ProKeyGen PLUS is not designed or intended to create unauthorized/illegal keys or serial numbers for applications/products available from other companies.

Activation

Registration and Activation are no longer required. However, registration is highly encouraged to receive update notifications and other product announcements sent via email or social media.

Donations

This product is fully functional and donations are not required. We do ask that if you find this product really useful, please consider a donation purchase from our online store: DONATE HERE

Quick Start

1. Enter the desired 3-character Vendor code.
2. Enter the desired serial number range to use.
3. Enter your own unique Encryption string.
4. Click the Generate Keys button and wait.
5. Review the generated list of Product Keys.
6. Click the Save button to save text file of list.

Versions

There are 3 versions of product key generators in the ProKeyGen Series of software applications to help generate serials/keys for your product lines:

EZ ProKeyGen ....FREE, No Cost but Registration Required;
Fully Functional 25-Character Generator;
Customizable with 100k Keys per Cypher.

ProKeyGen PLUS ....Single User License;
Fully Functional 30-Character Generator;
Customizable with 1 million Keys per Cypher;

ProKeyGen PRO ....Single User License;
Fully Functional 36-Character Generator;
Customizable with 10 million Keys per Cypher;
Save/Load Configuration Files;
Various Styles of digits and hyphens.

Available Free upon request to PRO version owners:
Visual Basic 2008+ source code for Product Key Validation
& Registration to secure your own Software applications.

Key Lists

Before uploading a list of Product Keys that was saved with ProKeyGen PLUS, before sure to remove all of the header information that is included for your benefit. Most brokers/resellers expect the listing to be provided as a plain text file with only one product key per line.

Simply delete the seven lines (from top to last row of equal signs) and save the file with a new filename to be used by your broker/reseller.

```
           ==================
           |  ProKeyGen PLUS  |
    =====================================
            Encryption String
    - - - - - - - - - - - - - - - - - - -
    1234567890ABCDEFGHIJKLMNPQRSTUVWXYZ
    =====================================
    PED0EM-0150H6-K4A0FL-0UD08U-GJ20Y0
    GGF0FP-0360J8-K5C0HM-0WF09V-PL3100
    PIH0GR-0570LA-K6E0JN-0YH0AW-GN4200
```

DELETE THESE LINES (left)

DELETE THESE LINES (right)

Since ProKeyGen PLUS saves the product key list as a plain text file, this is all you have to do. You will want to retain a copy of your original file because it contains your unique Encryption String.

> **NOTE:**
> If a broker/reseller expects a comma separated listing, use any compatible text editor or word processor to replace all paragraph characters/end of line markers with the comma "," character. See Microsoft WORD section for demonstration of using comma separators.

Possibilities

The actual product keys created using ProKeyGen PLUS is dependent on the Encryption String you use, however the number of possible unique keys using ProKeyGen PLUS can be calculated as follows:

$$35*35*35*35*35*35*35*35*35*35*35*35*35*35*35*35*35*35*35*35$$

$$52{,}521{,}875 * 52{,}521{,}875 * 52{,}521{,}875 * 52{,}521{,}875$$

Well, you get the idea. Don't burn out your calculator trying to get the final result. We hope you find ProKeyGen PLUS to be a value-added part of your software toolbox. Visit our website to purchase a copy today!

Estimated values based upon default allowed alpha-numeric character set and characters within key string derived from encryption algorithms.

Vendor Codes

You can use your own rendition of 3-character vendor codes to further group product keys. The vendor code is incorporated into the final keys and is reversed on every other line to prevent two similar keys in a row.

Serial Numbers

The specific serial numbers within your generated keys will start counting at zero "0" or "000000" as it is used. When counting your keys in groups of numbers, you must remember this to get equal sets of product keys.

Counting by 100's
0-99, 100-199, 200-299, 300-399.....999900-999999
Counting by 1,000's
0-999, 1000-1999, 2000-2999.....999000-999999

Instructions

1. **Enter the designated vendor code you desire to use**.

VENDOR CODE

PKG

3 Characters Long
All CAPITALS
Exclude Letter "O"

Here are some suggestions to help get you started:
PAY - PayLoadz   CPD - Content Paradise
SHR - Share*It   SCG - ShareCG
DAZ - Daz Productions   CNT - CNet Downloads
RND - Renderosity   TUR - Turbo Squid

2. **Enter the desired serial number range to use**. Totally up to you.

3. **Enter your own unique Encryption string**. It is suggested to use a different Encryption String for each individual product. It will be included with the list of product keys when you save them.

4. **Click the Generate Keys button and wait**. The Progress Bar will display the percentage of completion and the Number Keys will display the counter for which actual key as positioned in the list is being generated. If for some reason you cannot wait or wish to cancel the process, simply click on the ABORT button.

5. **Review the generated list of Product Keys**.

Customization

You can maximize the benefit of using ProKeyGen PLUS in several ways:

1. **Only generate the number the number of keys actually needed**, because you can return later and generate additional keys as required. For example, you only need 1,000 keys for the initial publication of a product so you set the serial range to "0" and "999". If you need more keys later (say 5,000 more), simply generate more using the same Encryption String and set the range First as "1000" and Last as "5999".

2. **Generate specific ranges of keys for designated Vendors**; You may want to use a common Vendor Code (perhaps for your own company name) for all your keys because you don't expect to use the full 1 million that can be generated You can issue a set number of keys (say 1,000) at a time to different vendors. For example, you generate the first 1,000 keys (0-999) for use by Vendor X and the second 1,000 keys (1000-1999) for Vendor Y.

3. **Specify unique encryption strings for designated Vendors**; this way the product keys generated are specific to the encryption string you used for each Vendor.

Microsoft WORD

This instruction developed using MS Word 2003 to replace paragraph markers with comma's to create a comma-separated listing in 3-steps:

1. **LOAD** the text file.
2. **FIND/REPLACE** all paragraph marks with comma (see illustrations).
3. **SAVE AS** plain text file.
*Click MORE button to expand dialog*

Winterbrose
Copyright (c) 2013, Winterbrose Arts & Graphics.
All Rights Reserved.
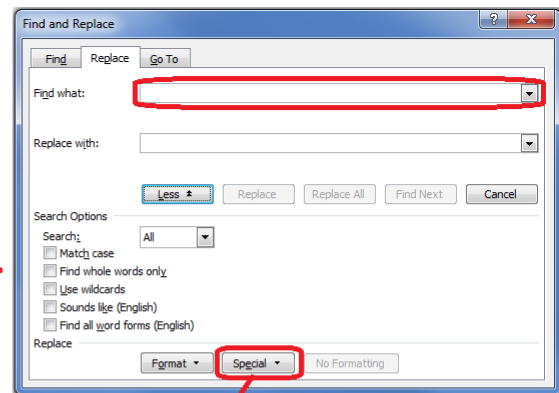

For Find What, click the SPECIAL button and select Paragraph Mark from popup menu.

*Now type the Comma "," in the Replace With field.*

Click Replace All button.

MS Word 2003: Using FIND/REPLACE to create Comma-separated List.
